#### **Health Equity Research & Trends Shows Multifaceted Impact**

According to the Harvard Business Review, racial health disparities are associated with substantial annual economic losses nationally:

\$35 billion in excess healthcare

expenditures

\$10 billion in illness-related lost productivity

\$200 billion

in premature death

Disproportionate shares come from factors influencing individual health: (Source: HHS OMH)

Clinical Care

**Environmental Factors** 

Racial and Ethnic Disparities

#### **Health Equity Harmonization Requires Multipronged Approach**

Regulatory Changes Care Delivery Adoptions

Care Financing Provisions

Community Sensitization

Consumer needs vary, depending on education, home environment, social support, income, and other social factors. Simply offering the same resources to everyone is not enough.

Health equity requires removing obstacles to access the resources offered by organizations so that everyone has a fair and just opportunity to be as healthy as possible and reach equal outcomes.

### **Several Regulatory Changes Under Way to Promote Health Equity**

Regulatory Body	Change Overview	Payer Impact
HHS Equity Action Plan	<ul> <li>Removal of info. access barriers for other language speaking members</li> </ul>	<ul> <li>Enable multilingual omnichannel digital engagement</li> </ul>
	<ul> <li>Extended postpartum coverage for Medicaid / CHIP</li> </ul>	<ul> <li>Promoting Health Equity assessments</li> </ul>
	Focused cohort principles for postpartum care & reporting	<ul> <li>Ingestion of SDOH data sources for Health Equity reporting</li> </ul>
	Health Equity assessment framework	
NCQA Health Equity Accreditation	<ul> <li>Comprehensive framework for organizations to measure and elevate health equity goals</li> </ul>	<ul> <li>Adoption of planned roadmap for advancing Health Equity goals</li> </ul>
NCQA HEDIS MY'23	<ul> <li>Health Equity screening measure for measuring gap &amp; intervention – food, housing, transportation</li> </ul>	Ability to measure and report performance to NCQA
CMS MA Stars 2024	<ul> <li>NASEM to define social risk factors (SRFs)</li> </ul>	<ul> <li>Enable advanced analytics for pseudo Health Equity Index</li> </ul>
	<ul> <li>Disability, LIS, DE stratified Stars reporting to CMS</li> </ul>	<ul> <li>Enhanced CMS Stars reporting with Health Equity stratification</li> </ul>
	Health Equity Index for Stars adjustments	

### Advancing Health Equity: Key Payer Focus Area for Improved Outcomes & Experience

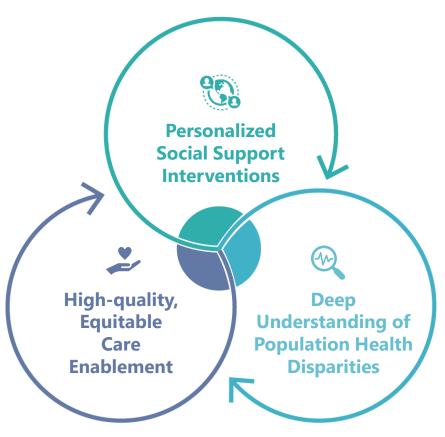

Payers and healthcare organizations need to analyze population social risk profiles with granularity to uncover the uneven distribution of health gaps across access, outcome, and experience dimensions.

Individual social risk scores should incorporate an inclusive breadth of social factors that strongly correlate and influence health outcomes, such as income, education, access to healthy food and home environment, drug / alcohol habits, and mental health status. Social and health risk scores should be blended to ensure focused cohort identification.

Health Equity advancement programs are most effective when they are designed for enrolling identified cohorts. Program design requires deep alignment and coordinated functioning of network and care management teams, community partnerships, supporting staff with sensitized and specialized training.

Effective, personalized outreach should consider individual social risk profiles and align with interventions best suited for their social characteristics and optimized success.

## **Equitable Care Considerations**

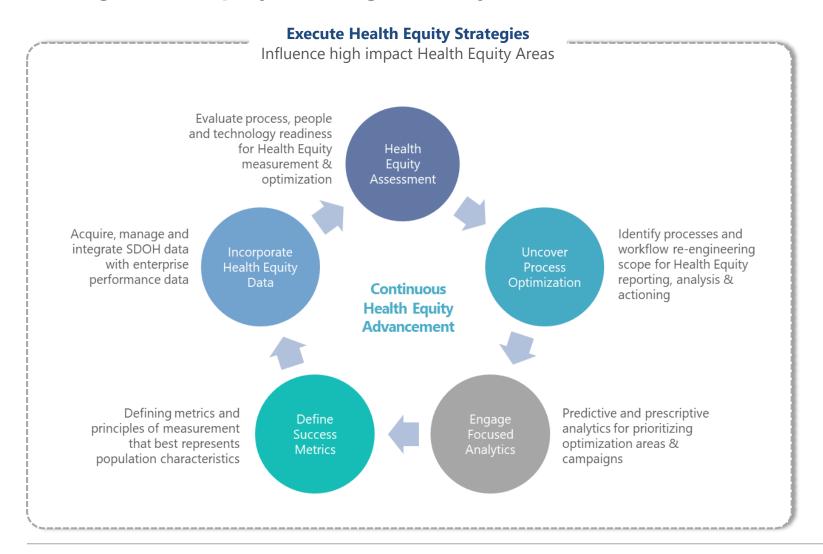

# **Key Enterprise Barriers to Advancing Health Equity**

- Workforce sensitization for Health Equity: Lack of alignment, sensitivity and flexible collaboration based on cohort characteristics, member profile
- Limited Focus on Institutionalizing Health Equity Planning: Absence of inclusive planning and support structures essential to drive health equity programs
- Poor Quality and Non-standard Health Equity Data: Insufficient individual social data availability, unregulated and nonstandardized formats
- Lack of Health Equity Inclusive Prioritizations: Limited technology capabilities across operational workflows for driving health equity-focused decisions

#### **Making Health Equity a Strategic Priority**

### Making Health Equity a Strategic Priority (contd.)

- ✓ NCQA Accreditation extends a gold standard Health Equity assessment framework that enables payers to measure their current state of readiness and draw a roadmap for future initiatives.
- ✓ Comprehensive Health Equity assessments should clearly establish processes for measuring and engaging a Health Equity focus across the payer value chain clinical, quality, utilization, operational, experience and financial areas along with a continuous improvement pathway.
- ✓ An inclusive data strategy needs to account for current process re-engineering for member-level social data collection, interoperability technology evolution (FHIR, custom APIs) for social data exchange, and value-based arrangements that incentivize data sharing efforts.
- ✓ Active engagement of advanced analytics can enable social-blended risk scores, focus cohorts with recommended interventions, simulate value-based incentives for driving optimized Health Equity advancement.

#### CitiusTech-FluidEdge are Enabling Payers with Health Equity Optimization

CitiusTech-FluidEdge offers comprehensive solutions and specialized services to payers and healthcare organizations to identify and mitigate healthcare disparities.

## Data Exploration Partnerships

# **Success Stories: Long-term, High-value Relationships with Leading Health Plans**

## West Coast Health System

3+ year relationship

- Assessment and enablement of CalAIM compliance – PHM and model of care strategy operationalization
- Enterprise roadmap to institutionalize 'Whole Person Care', SDOH adoption and enhanced Health Equity
- Operationalize member engagement strategy

# National Home Health Service Provider

3+ year relationship

- Identified improvement opportunities on MLR and PMPM post-engagement for each cohort based on social and clinical data
- Optimized cohort generation based on social demographics, risk score, disease comorbidities, and durability (outcomes)

## West Coast Blue Plan

3+ year relationship

- Combined SDOH and other datasets such as U.S.
   Census, USDA, HRSA with customer's historical performance data
- Modelled Member
  Engage-ability score with
  ~95% accuracy in outcome
  prediction and high
  campaign efficacy

#### **About CitiusTech**

With 8,000+ healthcare technology professionals worldwide, CitiusTech helps leading healthcare and life sciences organizations reinvent themselves by accelerating digital innovation, leveraging next-gen technologies, and driving data convergence across the healthcare ecosystem.

We provide strategic consulting, digital engineering, data, analytics & Al, specialized platforms and end-to-end solutions to over 130 organizations across the payer, provider, medtech and life sciences industries. Our key focus areas include healthcare interoperability data management, quality performance analytics, value-based care, omni channel member experience, connected health, virtual care delivery, real-world data solutions, clinical development, personalized medicine and population health management.

Our cutting-edge technology expertise, deep healthcare domain expertise and a strong focus on digital transformation enables healthcare and life sciences organizations to deliver better outcomes, accelerate growth, drive efficiencies, and ultimately make a meaningful impact to patients.
